Event Management System

It will be a web application by which people can easily organize an event online. Various kinds of event type, Food packages, Venue type, Photographer packages will be provided. People can select those packages and confirm his Event by this web application online. It will less the hassle of people as they can confirm almost everything for their event by sitting at home or any places. They don't need to go to the venue for his event confirmation.

Event Management System

It will have **two** type of users :

- 1)Admin**
- 2)User**

After entering in to the website

- First need to select using as **ADMIN or USER ?**
- If **ADMIN**, then need to write Username and Password. If using as a **USER** then need to give some information such as: Name, Email, Phone Number.

Admin :

- Admin can add various events type. He can add different types of venue, food packages consist of multiple food items , decoration packages, Photography packages. He can see User's selected packages for event and confirm the booking for event.

User :

*User need to select **date** for his event.

*Need to write **total number of guest** for his event.

User can select type of Event they want such as :

Type of Event:

- a) Birthday
- b) wedding ceremony
- c) Anniversary etc.

They can select type of venue they want such as :

Type of Venue:

- a) Open air
- b) Air conditioned etc.

User :

User can select food for his event from food packages such as:

Food Package A:

- a)Polao
- b)Roast
- c)Beef
